

Environmental protection and social responsibility

Responsible treatment of our environment is important to us.

Every employee is required to follow the rules of handling resources, energy and waste for their own protection and the protection of our environment. Every employee practices sustainability as part of their corporate culture.

The company TRASER Ltd. therefore declares that it will treat resources, energy and waste sensitively and sustainably and will practice:

- Efficient use of natural resources, increased recycling and recovery
- Development and implementation of energy projects that would have a positive impact on climate change,
- Purchase of energy-efficient products, services and technologies, support for high-performance design,
- Execution and implementation of our production activities of environmental management systems and Energy.

We declare that:

- We will comply with applicable laws and conditions regarding the environment and energy
- We will constantly improve and develop our performance in the environment and energy,
- We will take the necessary measures to reduce or eliminate the negative effects of our activities on the environment
- We will regularly review the specified purpose and our objectives to achieve this purpose and goals, we will ensure the creation of the necessary resources

Reducing energy consumption and ending waste are becoming increasingly important to us. Energy efficiency measures are increasingly recognized as a means not only of achieving a sustainable supply of energy, reducing greenhouse gas emissions, increasing security of supply and reducing import costs, but also to promoting competitiveness. Energy efficiency is therefore a strategic priority for us and the principle is that energy efficiency is paramount.

Renewable energy sources (wind, solar, hydropower, ocean energy, geothermal energy, biomass and biofuels) are an alternative to fossil fuels that contribute to reducing greenhouse gas emissions, diversifying energy supplies and reducing dependence on unreliable and volatile fossil markets. fuels, in particular oil and gas.

Therefore, we try to adhere to these principles in our company and implement them in our quality system as much as possible.
